Sir:

I hereby declare that:

1. My residence, post office address and citizenship are as stated below next to my name.
2. I am a co-inventor for U.S. Patent Application Serial No. 92,012 filed July 15, 1993 and which issued as U.S. Patent No. 5,397,857 on March 14, 1995, and for which invention a reissue patent is being solicited.
3. A copy of the reissue application is attached hereto. I reviewed and understand the contents of the specification, including the claims as amended or added by any amendments specifically referred to herein.

4. I acknowledge the duty to disclose information defined in 37 CFR §1.56 which is material to the examination of this application, namely, information that may affect the patentability of one or more claims in the application.

5. I believe that there is an error in the patent by reason of my claiming less that I had a right, as one of the patentees, to claim in the patent. I believe the original patent to be partly invalid or inoperative because, erroneously, the patent does not include claims such as the newly amended Claim 1 with Claims 2-7 dependent therefrom including newly added Claim 7. This error was made unintentionally and with no intention to deceive or mislead the United States Patent and Trademark Office, and, thus, without deceptive intent.

6. I executed an inventor's oath for a patent application which was filed in the United States Patent and Trademark Office. That application was filed on July 15, 1993 and given U.S. Serial No. 92, 012. U.S. Patent No. 5,397,857 issued from that application.

7. When I signed the oath submitted with U.S. Patent Application Serial No. 92,012, I did not appreciate that I was entitled to claims such as the newly amended Claim 1 with Claims 2-7 dependent therefrom including newly added Claim 7.

8. Specifically, Applicants were and are entitled to claims having a breath as set forth in newly amended Claim 1 and Claims 2-7.

9. Independent Claim 1 of the '857 patent, as amended, recites "A peripheral device PCB package comprising: two stamped metal covers with a plastic frame element corresponding to each cover, each cover having a first side and a second side with a plurality of fingers extending from said sides and wherein edges of the metal covers are bent to conform to the shape of the frame element and said fingers are embedded in the plastic frame elements forming an integral unit, the plastic frame elements being injection molded around the fingers; and wherein the plastic frame element extends beyond a plane of the metal cover so that a plastic perimeter surface is exposed, thereby facilitating bonding of the two covers."

10. Newly added Claim 7 depends from Claim 1 and recites that the plastic perimeter surface is integrally formed with the plastic frame elements. This feature of the invention was not claimed in the patent, through error which was made unintentionally with no intention to deceive or mislead the United States Patent and Trademark Office.

11. A copy of the reissue application is attached hereto. I have reviewed and understand the contents of the specification, including the claims, as amended or added by any amendments specifically referred to herein.

I hereby appoint the following attorney(s) and/or agent(s) to prosecute this application and to transact all business in the Patent and Trademark Office connected therewith:
